Chapter 1

IGNORE THIS! Deliberately broken doc page for self-test

Here's a code inclusion that works:

```
namespace GlobalParameters
 /// \ short Square of the wavenumber
double K_squared=10.0;
/// \backslashshort Number of terms used in the computation
 /// of the exact solution
unsigned N_fourier=10;
/// \short Flag to choose the Dirichlet to Neumann BC /// or ABC BC
bool DtN_BC=false;
 /// \ short Flag to choose wich order to use
 // in the ABCs BC: 1 for ABC 1st order...
unsigned ABC_order=3;
 /// Radius of outer boundary (must be a circle!)
double Outer_radius=1.5;
 /// Imaginary unit
 std::complex<double> I(0.0,1.0);
```

...and here's one that doesn't because I've deliberately broken the hook:

Here's a link that works

```
Sommerfeld radiation condition
```

and here's one that possibly doesn't because of an isolated "<a":

```
Sommerfeld radiation condition
```

Bla bla click on this and you won't get anywhere because the link is broken! bla bla.
